

Bug Fixes & UI Corrections

Batch 7 | Auto Repair Shop Management System | April 2026

7 fixes across 4 files. Fix #5 is the most nuanced — edit mode must load warehouse info without touching the offer price.

#	File	Summary
1	warehouse/page.tsx	Date column: show DD.MM.YYYY HH:MM using updated_at
2	Assyst component	■■■■■■■■■■ ■■■ width = same as ■■■■■■■■■■ ■■■■■ above it
3	Assyst component	■■■ ■■ ■■■■■■■■■■ width = same as ■■■■■■■■■■ ■■■■■ above it
4	Assyst component	■■■■■■■■■■ ■■■: no char limit; ■■■ ■■ ■■■■■■■■■■: max 12 chars
5	PartsFieldArray.tsx	Edit modal: load warehouse info (stock/cost/margin) without overwriting offer price
6	FloatingSummary.tsx	Summary: add total delivery cost + profit rows from warehouse parts
7	offers/page.tsx	On offer update: bump updated_at to NOW(); sort list by updated_at DESC

Fix #1 — Warehouse Date Column: Show Date + Time

warehouse/page.tsx

The Date column currently shows only the date. Add the time so changes to parts can be tracked precisely.

- Format: DD.MM.YYYY HH:MM
- Use updated_at (not created_at) — reflects the latest edit time.
- Add updated_at to the warehouse SELECT query if not already fetched.

Fix #2 + 3 + 4 — Assyst: Field Widths + Character Limits

Assyst component

Three related fixes to the Assyst Plus panel layout and input constraints.

Fix #2 — width:

Make the input the same width as () directly above it. Both are in the left column of the 2-column grid — they must align perfectly.

Fix #3 — width:

Make the input the same width as () above it. Both are in the right column. The button sits to the right of this field — adjust layout so the field fills the column width and the button stays in its current position.

Fix #4 — Character limits:

- : remove maxLength restriction (or set to 100+). Accepts long codes.
- : set maxLength=12. This code is always short.

The screenshot shows the ASSYST PLUS form. It has a dark background with white text. The title 'ASSYST PLUS' is at the top. Below it are four input fields arranged in a 2x2 grid. The top-left field is labeled 'Оставащо време (дни)' and contains '+98'. The top-right field is labeled 'Оставащ пробег (км)' and contains '+7055'. Below the top-right field are two buttons: 'км' (selected) and 'мили'. The bottom-left field is labeled 'Сервизен код' and contains 'a4'. The bottom-right field is labeled 'Код на обслужване' and contains '00002000k50s('. To the right of the bottom-right field is a blue button labeled 'Запази'.

Current state: (left, showing 'a4') is narrower than above it. (right, showing '00002000k50s(') is narrower than above it. Fix: both bottom fields must match the width of the field directly above them.

Fix #5 — Edit Offer Part: Load Warehouse Info Without Overwriting Price

PartsFieldArray.tsx – AddEditPartModal (edit mode)

When opening an existing offer part for editing, the modal shows ' ' but does not load the warehouse data. The user has to manually re-select the part from the autocomplete — but this overwrites the offer price with the warehouse sale price, losing any custom price set in the offer.

When the modal opens with an existing `part_number`, immediately do an exact-match query on `warehouse_parts` for that part number.

- b) Price field behavior:**

- The price field must NEVER be overwritten when opening in edit mode. Only the info display (stock, cost, margin, profit) is populated from the warehouse.

Fix #6 — Offer Summary: Add Delivery Cost + Profit from Warehouse Parts

The offer summary panel (■■■■■■■■■■) does not show delivery cost or profit from parts, even when those parts have known cost prices in the warehouse.

Data source:

After Fix #5, warehouse cost_price is stored in local state for each part when the modal is opened. Use that stored value. Parts with unknown or zero cost price are excluded from both calculations — do not display 0 as real data.

Show these rows only if at least one part has a known cost_price > 0. Format same as existing summary rows — label left, value right, same font and size.

■ These are display-only calculated fields — nothing is saved to the database.

Fix #7 — Offers List: Sort by updated_at. Bump on Save

offers/page.tsx + offer update action/API

When an existing offer is edited and saved, it stays at its original position in the list (sorted by creation date). Updated offers should surface to the top.

a) Bump updated_at on save:

In the offer update logic, explicitly set `updated_at = NOW()`. Check if this is already being done — if not, add it. If `updated_at` column does not exist on the offers table, add it with a default trigger identical to the one used on `warehouse_parts`.

b) Sort offers list by updated_at DESC:

Change the default sort in the offers list query from `created_at DESC` to `updated_at DESC`. For offers that have never been updated, `updated_at` should equal `created_at`, so ordering is preserved for untouched offers.

■ Test: open an old offer from page 2 or 3, edit anything, save, go back to the list — it must now be at the top.

Pre-Completion Checklist

- #1: Warehouse Date column shows DD.MM.YYYY HH:MM using updated_at
- #2: input is same width as (12) above it
- #3: input is same width as (12) above it
- #4: accepts long input (no short maxLength); capped at 12 chars
- #5: Edit modal queries warehouse on open by part_number (exact match)
- #5: Stock quantity, delivery cost, margin %, profit displayed when modal opens in edit mode
- #5: Margin calculated using warehouse cost vs current OFFER price (not warehouse sale price)
- #5: Offer price field is never touched/overwritten when modal opens in edit mode
- #5: Warehouse cost_price stored in local state; margin recalculates live on price keystroke
- #6: Summary shows (sum of cost × qty for parts with known cost)
- #6: Summary shows (sum of (offer_price - cost) × qty)
- #6: Parts with unknown or zero cost_price excluded from both calculations
- #6: Summary rows hidden if no parts have a known cost_price > 0
- #7: offer updated_at set to NOW() on every update/save
- #7: Offers list sorted by updated_at DESC — recently edited offers appear at top
