

MB Admin Mechanics - Corrections for Claude Code

Prepared as an implementation brief and prompt for Claude Code. The fixes apply mainly to offers, checks, earnings, receiver/mechanic earnings UI, and vehicle model data.

Files mentioned by the client

- @offers/page.tsx
- @offers/edit/page.tsx
- @checks/page.tsx
- @create-check/page.tsx
- @earnings/page.tsx
- @earnings/edit/page.tsx
- @FloatingSummary.tsx

Fix	Main request	Primary files
1	Prevent data loss when saving offers/checks fails. Keep form values and show error.	@offers/edit/page.tsx, @checks/page.tsx, @create-check/page.tsx
2	Add Advance / Аванс between Card and Fines; deduct it from final payable amount.	@earnings/page.tsx, @earnings/edit/page.tsx
3	Make receiver earnings match mechanics layout; remove unnecessary manual Cash input; rename Remaining to Cash.	@earnings/page.tsx, @earnings/edit/page.tsx
4	Fix offer list date priority: service card date, then updated date, then creation date.	@offers/page.tsx, @offers/edit/page.tsx, @FloatingSummary.tsx
5	Add missing vehicle models 292 and 216 to the dropdown/source list.	Vehicle model source/list component

Image references

Image 1 - Earnings deductions

Current earnings summary. Add a new field Аванс (€) / Advance (€) between Карта (€) / Card and Глоби (€) / Fines. This value must be deducted from the final payable amount.

Image 2 - Receiver earnings

Receiver earnings should be redesigned to follow the same visual structure as mechanics earnings while preserving receiver-specific pricing logic.

Image 3 - Mechanics earnings reference

Mechanics earnings visual layout is the reference for the receiver section. Remove the unnecessary manual В брой / Cash input and change the bottom label Остатък / Remaining to В брой / Cash where requested.

Fix 1 - Prevent data loss when saving offers and checks

Through the service profile service@mbcenter.bg, users often fill in offers or checks, click save, and receive a save error. Everything entered is lost and they need to start again. This must be fixed for offers and checks.

Required implementation details

- Do not clear or reset the form until the save request succeeds.
- If saving fails, keep all entered values in the form.
- Show a clear error message or toast when saving fails.
- Disable the save button while saving to prevent double-submits.
- Use try/catch/finally around save logic.
- Allow the user to save again after the error without re-entering data.
- Consider local draft/state preservation for longer forms if suitable.

Acceptance criteria

- Failed save on offers does not erase form data.
- Failed save on checks does not erase form data.
- The UI clearly communicates the failure.
- Successful save behavior remains unchanged.

Fix 2 - Add Advance / Аванс field in earnings

Add a new deduction field between Card and Fines in the earnings pages. Label it Аванс (€), meaning Advance (€). It must be deducted from the final amount whenever it exists.

Required implementation details

- Field order: Карта (€), Аванс (€), Глоби (€), Бонус (€).
- Formula: $\text{amountToPay} = \text{totalEarned} - \text{card} - \text{advance} - \text{fines} + \text{bonus}$.
- Empty advance value should behave as 0.
- Persist advance consistently wherever card/fines/bonus are currently stored.
- Include advance in monthly summaries and PDF exports if these values are exported.

Acceptance criteria

- Аванс (€) appears between Карта (€) and Глоби (€).
- Аванс is saved, loaded, and edited correctly.
- Аванс is deducted from the payable amount.
- Existing Card, Fines, and Bonus behavior remains unchanged.

Fix 3 - Receiver earnings visual layout and cash label

Change the receiver earnings section so it uses the same visual style as mechanics earnings. Keep the receiver pricing logic, but remove the unnecessary manual В брой / Cash input. At the bottom, change Остатък / Remaining to В брой / Cash.

Required implementation details

- Receiver earnings should visually match mechanics earnings.
- Keep receiver-specific pricing and calculation logic.
- Remove the unnecessary editable Cash input.
- Cash amount should be calculated automatically, not manually typed.
- Change the bottom label Остатък / Remaining to В брой / Cash.

Acceptance criteria

- Receiver section has the same visual structure as mechanics.
- Manual cash input is removed where unnecessary.
- Receiver cash amount is calculated correctly.
- Bottom label is updated to В брой / Cash.
- Mechanics behavior remains unchanged.

Fix 4 - Offer list date logic

When an old offer is edited, it appears at the top of the offers list but still shows its old creation date. The list should show the service card date when a service card exists, otherwise the offer updated date, otherwise the creation date.

Required implementation details

- Date priority: service card date first, then offer updated date, then offer creation date.
- Creating a service card should not incorrectly overwrite the offer update timestamp unless the offer itself was edited.
- Keep offer creation date, offer updated date, and service card date as separate concepts.
- Sorting and displayed date should remain consistent.

Acceptance criteria

- Edited offers show last modified date if no service card exists.
- Offers with service cards show service card date.
- Service card creation does not corrupt offer update timestamp.
- Offer list remains sorted/displayed consistently.

Fix 5 - Missing vehicle models

The vehicle model dropdown/list is missing models 292 and 216. Add them and review the source list for other missing model codes.

Required implementation details

- Find the source list/data used by the vehicle model dropdown.
- Add model codes 292 and 216.
- Check whether other models are missing from the same source.

Acceptance criteria

- Models 292 and 216 are available in the dropdown.
- The dropdown uses complete source data.
- Existing selection behavior remains unchanged.

Copy-paste prompt for Claude Code

You are working in the `mb-admin-mechanics` project. Please inspect the existing implementation and fix the following issues cleanly without changing unrelated behavior.

Main files mentioned by the client:

- @offers/page.tsx
- @offers/edit/page.tsx
- @checks/page.tsx
- @create-check/page.tsx
- @earnings/page.tsx
- @earnings/edit/page.tsx
- @FloatingSummary.tsx

1. Prevent form data loss when saving offers and checks fails

In the service profile service@mbcenter.bg, users often fill in offers or checks, click save, and then get a save error. When this happens, everything they entered is lost and they must fill it in again.

Please review and improve the save flow in @offers/edit/page.tsx, @checks/page.tsx, and @create-check/page.tsx.

Required behavior:

- Do not clear/reset the form until the save request succeeds.
- If saving fails, keep all entered values in the form.
- Show a clear error message/toast when saving fails.
- Disable the save button while saving to avoid double-submits.
- Wrap save logic in proper try/catch/finally handling.
- Make sure the user can click save again after the error without re-entering everything.
- If suitable for the existing architecture, add local draft/state preservation for long forms.

2. Add Advance / Аванс field in earnings

In @earnings/page.tsx and @earnings/edit/page.tsx, add a new deduction field between Card and Fines.

Field label: Аванс (€) / Advance (€)

Field order: Карта (€), Аванс (€), Глоби (€), Бонус (€)

Calculation: amountToPay = totalEarned - card - advance - fines + bonus

Empty values should behave as 0.

Make sure advance is saved, loaded, edited, and included in any monthly summaries or PDF exports if the existing page exports these values.

3. Update receiver earnings visual layout and remove unnecessary cash input

The receiver earnings section should use the same visual style/layout as the mechanics earnings section.

Keep receiver-specific pricing/calculation logic, but:

- Make receiver earnings visually consistent with mechanics earnings.
- Remove the unnecessary editable input field for В брой / Cash.
- The cash amount should be calculated automatically, not typed manually.
- At the bottom, where the label currently says Остатък / Remaining, change it to В брой / Cash.
- Do not break existing receiver calculation/pricing logic.

4. Fix the offers list date logic

Current issue: when an old offer is edited, it appears at the top of the offers list, but the displayed date remains the old original creation date.

Required date priority for the offers list:

- 1. If the offer has a service card: show the service card date.**
- 2. If the offer has no service card but has been edited: show the offer last modified/updated date.**
- 3. If the offer has no service card and has never been edited: show the original offer creation date.**

Important: creating a service card should not incorrectly overwrite the offer's own update timestamp unless the offer itself was actually changed.

Keep these concepts separate: offer creation date, offer last updated date, service card date.

5. Add missing vehicle models 292 and 216

The vehicle model dropdown/list is missing models 292 and 216. Find the source list/data used by the dropdown, add these models, and check whether other model codes are missing.

Final acceptance checks:

- Failed save on offers does not erase entered data.
- Failed save on checks does not erase entered data.
- Save buttons have proper saving/loading state.
- Аванс (€) appears between Карта (€) and Глоби (€).
- Аванс is deducted from the final payable amount.
- Receiver earnings use the same visual style as mechanics.
- The unnecessary manual В брой input is removed from the receiver section.
- Bottom label Остатък is changed to В брой where requested.
- Offer list date uses service card date first, then offer updated date, then offer creation date.
- Creating a service card does not incorrectly modify the offer update timestamp.
- Vehicle models 292 and 216 are available in the model dropdown.
- No unrelated behavior is changed.
