

Bug Fixes & UI Corrections

Batch 6 | Auto Repair Shop Management System | April 2026

9 fixes across multiple files. Fix #8 is critical — stock deduction on service card creation. Fixes #5, #6, #9 require screenshots sent back for visual review before continuing.

#	File	Summary
1	PartsFieldArray.tsx	Replace auto-create with explicit "████████ █ ████████" button + delivery price prompt
2	PartsFieldArray.tsx	Margin/Profit must recalculate when user manually changes price after auto-fill
3	Assyst component	Add placeholders: ██████████ ███ → "W0W", ███ █ ████████████████ → "B2"
4	AdminSidebar.tsx	Remove "██████" nav link from mechanic role
5	warehouse/page.tsx	Center header text vertically; font size +1–2px; send screenshot
6	OffersTable.tsx	Offers list header: font +1px + bold; send screenshot
7	WarehousePartModal	Toast on save → "██████████"
8	Service card creation	■ CRITICAL: Deduct warehouse stock when service card is created
9	WarehousePartModal	Reorder fields: Part# + Replaced By on row; Manufacturer + Qty on row; send screenshot

Fix #1 — Replace Auto-create with "Add Part" Button

PartsFieldArray.tsx — AddEditPartModal

Remove the silent background auto-create logic. Replace with an explicit button "Добави част" inside AddEditPartModal, visible in both new and edit modes.

Button flow:

1. User clicks "Добави част".
2. A small inline field appears asking for "Доставна цена" (Delivery Price).
3. User enters delivery price and confirms.
4. Warehouse entry created: name, part number, manufacturer, sale price from offer, delivery price entered, quantity = 0.
5. Show success: "Част добавена успешно."

If the part number already exists in warehouse: show button as disabled with label "Част вече съществува" — never duplicate.

■ Remove the silent auto-create entirely — it must no longer fire on offer part save.

Reference: AddEditPartModal in offer context. Add "Добави част" button here. When part already exists in warehouse (as shown — "Наличност: 11"), button should show "Част вече съществува" disabled.

Fix #2 — Margin/Profit Recalculates on Manual Price Change

PartsFieldArray.tsx — AddEditPartModal

When a warehouse part is selected via autocomplete, the modal auto-fills the price and shows warehouse Margin % and Profit. If the user then changes the price manually, Margin and Profit freeze at the warehouse values instead of recalculating.

Fix:

- Store warehouse cost_price in local state when a warehouse part is selected.
- On every keystroke in the price field: recalculate Margin % and Profit using stored cost vs current price.
- Margin % = $((\text{sale} - \text{cost}) / \text{cost}) \times 100$. Profit = sale - cost.
- If cost is 0 or unknown → show '—' for Margin %, raw diff for Profit.

OK

Отказ

Reference: Margin shows 52.1% / 10.48 € based on warehouse cost 20.10 € and sale price 30.58 €. If user changes price to e.g. 25.00 €, values must update live: $((25-20.10)/20.10) \times 100 = 24.4\%$ / 4.90 €

Fix #3 + 4 — Assyst Placeholders + Remove " | | | | " from Mechanic

Assyst component + AdminSidebar.tsx

Fix #3 — Assyst placeholders:

Add HTML placeholder attributes to two Assyst fields: `██████████ ████` → `placeholder="W0W"` | `████ ███`
`██████████████████` → `placeholder="B2"`. Fields remain editable — placeholders are display hints only.

Fix #4 — Remove Warehouse from mechanic nav:

Hide the `████████` nav link when current user role = mechanic. Remains visible for admin and reception. Also add route guard on `/warehouse` → redirect mechanics away.

Reference: Assyst Plus panel. `██████████ ████` field needs placeholder 'W0W'. `████ ███` `██████████████████` needs placeholder 'B2'. These two fields are currently empty with no hints.

Fix #5 + 6 — Table Headers: Vertical Centering + Font Size

```
warehouse/page.tsx + OffersTable.tsx
```

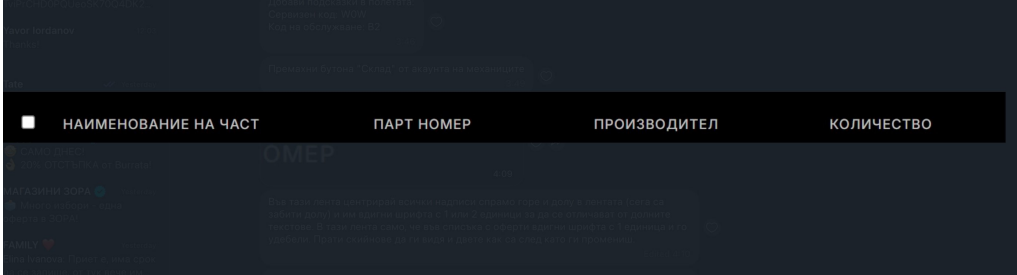

Fix #5 — Warehouse table header:

Header text is stuck to the bottom of the header row. Fix: vertically center all header text. Also increase font size by 1–2px vs current. Apply only to warehouse header row.

Fix #6 — Offers list header:

Increase font size by 1px and make bold. Apply only to the offers list table header.

■ Send a screenshot after each of these changes before moving on. User wants to review visually.

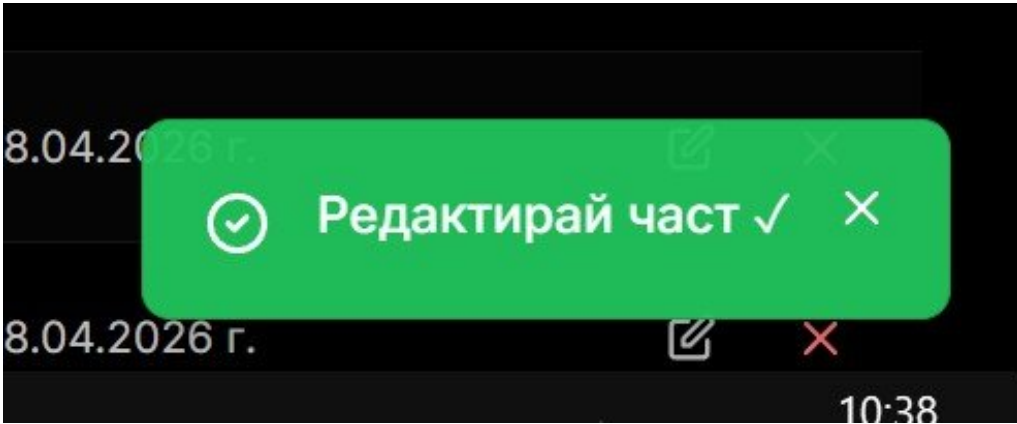

Reference: Warehouse header row — text labels (■■■■■■■■■■ ■■ ■■■■, ■■■■ ■■■■, ■■■■■■■■■■, ■■■■■■■■■■) are stuck to the bottom. Fix: vertically center them and increase font size 1–2px. Also apply font +1px + bold to the offers list header separately.

Fix #7 — Warehouse Save Toast → "██████████"

WarehousePartModal.tsx + any warehouse save toast

Current toast on save shows "████████████████████ ██████ ✓" or similar. Change all warehouse part save toasts (both create and update) to show "████████████████████" — the same text used in the offers flow.

Current toast: "██████████ ██████ ✓" — change to "██████████" to match the offers save behavior.

Fix #8 — CRITICAL — Deduct Warehouse Stock on Service Card Creation

Service card creation route/action (find where service cards are created from offers)

When a service card is created from an offer, the quantities of parts in that offer must be deducted from the warehouse stock. This is the core inventory deduction flow.

Exact behavior:

- Trigger: only when a service card is created from an offer — not on offer save, not on offer edit.
- For each offer_items row: find matching warehouse_parts record by part_number.
- Subtract offer line item quantity from warehouse_parts.quantity.

Current modal layout (single column). Reorder to: Row 2 = Part Number | Replaced By. Row 3 = Manufacturer | Quantity. All other rows unchanged.

Pre-Completion Checklist

- #1: '■■■■■■■ ■ ■■■■■■' button in AddEditPartModal — visible in new AND edit mode
- #1: Button prompts for delivery price before creating warehouse entry
- #1: Button shows '■■■■■ ■ ■■■■■■' (disabled) when part already in warehouse
- #1: Silent auto-create background logic removed entirely
- #2: Margin and Profit recalculate on every keystroke in price field after warehouse auto-fill
- #2: Warehouse cost_price stored in local state; used for all calculations even after price edit
- #3: ■■■■■■■■ ■■■ placeholder = 'W0W'; ■■■ ■■ ■■■■■■■■■■ placeholder = 'B2'
- #4: Warehouse nav link hidden for mechanic role; route guard added for /warehouse
- #5: Warehouse header vertically centered + font size increased → screenshot sent
- #6: Offers list header font +1px + bold → screenshot sent
- #7: Warehouse part save toast shows '■■■■■■■■■' (both create and update)
- #8: Service card creation deducts warehouse quantities for matching parts
- #8: Stock never goes below 0 after deduction
- #8: Deduction fires only once per service card (idempotency handled)
- #8: Parts not in warehouse skipped silently; offer save never blocked
- #9: Part Number and Replaced By on same row (50/50); Manufacturer and Quantity on same row (50/50) → screenshot sent
